

Bees are bee-iliant

As you might know, at Sprout, we're committed to spreading a green message, and now we're extending that message to the protection of bees 🐝

Bees are simply bee-iliant. They pollinate around a third of the food we eat, and many other animal species also rely on bees for their food. Sadly, bees are in decline, mainly due to urbanization and changes in farming methods. A world without bees won't be good.

Yet, there are reasons to be happy; by growing more bee-friendly plants we can help bees thrive. With Sprout's new Happy Bee edition turning your garden, window box or planter into a bee haven is easy.

[Shop the new Happy Bee Edition](#)

The Happy Bee Edition contains five graphite pencils, each engraved with inspiring bee statements and containing different bee-friendly seeds:

- Sage
- Chia
- Carnation
- Coriander
- Thyme

Write, draw or doodle with your Happy Bee pencils, and when only the stub remains, plant them, so they sprout into bee-utiful bee-friendly plants 🌱🐝

Why the bees are important

Want to know more about how you can support happy bees? Go follow Sprout on [Instagram](#) and [Facebook](#) to stay up to date.

Bee safe,
